TAKE YOUR SEAT

This is what I saw as I walked along the train carriage, looking for seat **13**.

33 - Window
34 - Aisle

29 - Window
30 - Aisle

Can you predict whether, say, seat **13** will be an aisle seat or a window seat?

What do you make of these possible responses?

- Half of the seats are aisle seats and half are window seats, so there is a **50%** chance of either.
- Odd-numbered seats are window seats, so **13** will be a window seat.
- **13** ends in a **3**, like **33**, so **13** will be a window seat.
- For superstitious reasons, there is no seat **13**.
